Maybe, it's possible a physics with no units.
We only need to define light speed and the vacuum permittivity.

Number density of neutrinos in the earth atmosphere:

$$n = 1.6 \times 10^6 m^{-3}$$

The next equations have wrong units.

Vacuum permeability (inverse density):

$$\mu_0 = \frac{2}{n}$$

Light speed (speed):

$$c = \left(\frac{137n^4}{32} \right)^{1/3}$$

Vacuum permittivity (distance):

$$\varepsilon_0 = \left(\frac{128}{137^2 n^5} \right)^{1/3}$$

Loschmidt constant:

$$n_0 = \frac{137n^4}{32}$$

The quantum of the magnetic vector potential is the same as the quantum of circulation:

$$A_0 = \frac{h}{2m_e} = \frac{x_e c}{2} ; \quad A = \frac{\mu_0 I}{2}$$
